Western Music

Grade: 9

Title of card: Music and Technology

Theme: Social media

Competency: Competence in Communicating Ideas, Feelings and Experiences Through Music

Element: Communicate ideas creatively through solo and group performances.

Performance criteria:

Use basic rhythms and sounds to communicate feelings.

Purpose of Activity:

This activity is designed to introduce to students to creative use of technology in music composition and performance. It aims to develop their understanding of how digital tools including music software and AI can be used to express, emotions, ideas and experiences through music. By exploring platforms for music streaming, students will become familiar with how music is produced, performed and distributed in today's digital world.

Learning outcomes

At the end of this unit, learners should be able to:

- List the different platforms of streaming music
- Recognise tools used in music production
- Identify advantages and disadvantages of using streaming platforms

Introduction

Music Technology refers to the tools, software and techniques used to create, produce, record and distribute music.

Activity 1
Introduce music streaming platforms where music can be viewed and shared.

Activity 2
Discuss tools used in music production, as well as advantages and disadvantages of using streaming platforms.

Resources and materials

Laptop/smartphone and audio equipment.

Teaching trajectories/Implementation backgrounds

Students are provided with worksheet to:

Activity 1: Recognise the different music streaming platforms.

Activity 2: List advantages and disadvantages of using streaming platforms.

Assessment

Student worksheet, oral questioning.
